DB Controls & HVAC Services

Company Guiding Principles

- Sustainability: Taking responsibility for energy reduction.
- Innovation: Embracing the latest technology.
- Exceed expectations: Constantly strive to be the leaders in our field.
- Professionalism: Always work to the highest professional standards.

Company Profile

DB Controls & HVAC Services is a privately owned West Australian company specialising in mechanical HVAC controls, VRF/VRV commissioning and building sustainability. We apply our guiding principles to all aspects of our business to not only offer the highest level of professional service but constantly strive to improve upon on it.

The company services the commercial, industrial and resources sectors and is owned and operated by David Byrne. As a fully qualified refrigeration mechanic David has worked the industry since 2002 and has previous experience working in a lead technical role responsible for system and control commissioning on over 280 tender based projects including some of the largest projects throughout WA.

Our goal is to reduce energy consumption while improving serviceability and comfort levels throughout the building. We believe that automation and energy management systems only provide part of the solution. Our technical trade background and expertise on commercial & industrial HVAC systems enables us to ensure that the equipment we control is operating correctly at optimum efficiency before any control systems are applied. We then design and apply custom control solutions to suit the building services, plant and application individual to each of our projects.

Our experience, professionalism and commitment to innovation has meant that many of the leading manufacturers and contractors throughout WA have used our services to resolve issues that may have been ongoing for years. Through a combination of our guiding principles, experience and passion for the industry we believe we can offer a level of professional and technical service to our customers which not only exceeds their expectations but aims to raise the standard to a level.
